

Experiment No. 1

Aim: Business Idea Generation using Mind Mapping

Theory:

Mind Mapping is a visual ideation technique used to generate, develop, and connect ideas around a central business problem or theme. It encourages free thinking and creativity and helps entrepreneurs discover new angles and solutions.

A mind map involves writing down a central theme and thinking of new and related ideas which radiate out from the center.

In this experiment, we start with a central theme (start-up idea) and expand into branches like Idea, Vision, Team, Research, Survey, Funding, Partnership etc. Each branch is further broken down into sub-branches representing problems, possible solutions. This visual exploration helps identify innovative, real-world business opportunities.

Case Study:

Design a mind map for a start-up idea.

1. Selection of an idea: Form a group and select one start-up idea.
2. Information Gathering: Gather all the information you want to put in your mind map. It should contain Idea, Vision, Team, Research, Survey, Funding, Partnership etc.
3. Use suggested open software tool (Canva) to draw a mind map of your start-up idea. Prepare a creative mind map, starting from your main idea as central object and branch out to identify areas of opportunity.
4. Sub-branch those into ideas, possible solutions, technologies, target users, etc.
